

8801

Non-contact Infrared Forehead Thermometer

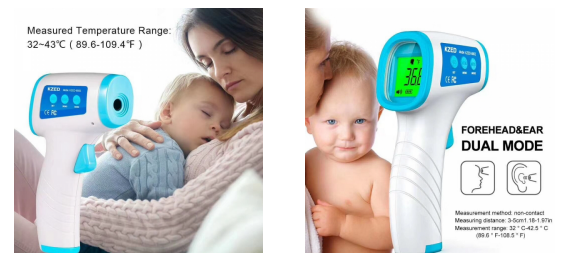

The 8801 is a lightweight and compact infrared forehead thermometer for instant and safe, non-contact body temperature measurement.

Providing an immediate and accurate reading of the subject without the need to make physical contact, this infrared thermometer is ideal for health and safety checking of staff and visitors during post-pandemic return to work and school entrances in the 'new normal'.

Also ideal for checking family members, babies, infants for any signs of high temperature or fever symptoms.

Features

- Non-contact temperature measurement
- Measures high body temperature - a main symptom of Coronavirus
- Two temperature ranges - body and object surface
- Battery operated
- 50 measurement storage memory
- Illuminated 3-colour display
