

C317 Series Indoor Monitor Admin Guide

About This Manual

Thank you for choosing Akuvox's C317 series indoor monitor. This manual is intended for end users, who need to use and configure the indoor monitor. This manual provides an introduction of all functions and features of the product. It is suitable for 83.31.2.3xx version. Please visit Akuvox forum or consult technical support for any new information or latest firmware.

Note: Please refer to universal abbreviation form in the end of manual when meet any abbreviation letter.

1. Product Overview

1.1. Product Description

C317X is an Android SIP-based with smooth touch-screen indoor monitor. It can be connected with Akuvox door phone for audio/video communication, unlocking and monitoring.

Residents can communicate with visitors via audio/video call, and it supports to unlock the door remotely. It is more convenient and safer for residents to check the visitor's identity through its video preview function.

C317X are often applied to scenarios such as villas, apartments and buildings.

1.2. Connector Introduction

Ethernet (POE): Ethernet (POE) connector which it can provide both power and network connection.

RJ45 (PON): Share the network access from Ethernet (POE) port,

and for PC and other equipments connection.

12V/GND: External power supply terminal if POE is not available.

RS485A/B: RS485 terminal.

Bell/GND: Connect a simple two-wire door bell.

Relay A/B (NO/COM/NC): Relay control terminal.

IO1- IO8/GND: Connect with different alarm detectors for 8 security zones.

Note: The general indoor monitor interface diagram is only for reference.

2. Daily Use

2.1. Starting

When booting C317X first time, users need to choose a suitable way to connect to network, wireless or wire.

To choose a proper device mode according to specific application scenarios. C317X supports 3 modes, including **Cloud**, **Discovery** and **SDMC**. It only pop up Cloud Mode and Discovery Mode for users choosing. Tap **Skip** if users are adopting SDMC mode. Discovery mode is default mode if you don't choose any device mode.

Discovery mode: It is a plug and play configuration mode. Akuvox devices will configure themselves automatically when users power on the devices and connect them to network. It is super time-saving mode and it will greatly bring users convenience by reducing

Figure 2.1-1 Network selection

Figure 2.1-2 Device mode selection

manual operations. This mode do not need to be done any configurations previously by the administrator.

Cloud mode: Akuvox Cloud is an all in one management system. Akuvox Cloud is the mobile service that allows audio, video, remote access control between smart phones and Akuvox intercoms. All configurations in the device will be issued automatically from cloud. If users decide to use Akuvox cloud, please contact administrator, who will help to configure related settings before using. **SDMC mode:** SDMC is a center management software which is

suitable for managing a community in LAN. The device will get settings from SDMC automatically.

2.2. Making a Call

There are 6 ways to establish VOIP calls by C317X.

2.2.1. Calling from Call List

In the home page, choose a number from **Call List** to make a call.

 Scroll up or down the Call List to choose the contact that users want to call.

Note: In Cloud or SDMC mode, the **Call List** of C317X will be issued from the system.

2.2.2. Calling from All Call

In the home page, it could call multiple indoor monitors if they are set under the same multicast address. During the session, C317X is listened by other indoor monitors.

Figure 2.2.1-1 Call from call list

Figure 2.2.2-1 Call from all call

• Tap **All Call** icon to call other indoor monitors which are set in the same multicast group.

2.2.3. Calling from Missed Call

In the home page, missed call indicates how many calls that users missed (1 missed call for an example). Missed call could be treated as a brief call log.

- Tap **Missed Call** icon ① to view the calls that were not answered before.
- Choose the contact on the call list 2 which users want to call out.
- Click account above the keypad ③ to switch accounts to make a call.
- Choose Audio ④ or Video ⑤ mode to call out.

Figure 2.2.3-2 Call from miss call

2.2.4. Calling from Device

It will display the devices connected with C317X on the contact interface. On the device, go to **More - Contact**.

- Click **Update** ① to synchronous the contact automatically.
- Choose a device 2 which users want to call.
- Choose Audio ③ or Video ④ mode to call out.

Note: Only under Discovery mode, users need to press **Update** key manually.

2.2.5. Calling from LocalPhoneBook

On the device, go to **More** - **Contact** to enter the **Local PhoneBook** interface to make a call.

- C317X supports fuzzy matching query ①To search the list by entering number or alphabet.
- Scroll up or down to select contact 2 that users want to call.

Figure 2.2.5-1 Call from local phonebook

C317X Admin Guide

• Choose Audio ③ or Video ④ mode to call out.

2.2.6. Calling from Keypad

On the device, go to More - Call to get access to keypad.

- Click account icon ① above the keypad to switch accounts to make a call.
- Input the SIP account /IP address to the keypad ② to call the corresponding devices or soft phone.
- Choose Audio ③ or Video ④ mode to call out.

2.3. Receiving a Call

2.3.1. Receive an Incoming Call

C317X supports to preview the caller when it receives an incoming call from door phone.

• Tap **Answer** to pick up the incoming call.

Figure 2.2.6-1 Call from keypad

Figure 2.3.1-1 Incoming call

C317X Admin Guide

 Tap Cancel to reject the incoming call. Press "+" or "-" of the volume on the right side to adjust the ring tone volume.

2.3.2. During the session

- Tap Unlock to open the corresponding door (if the call is from outdoor unit).
- Tap **Capture** to take a screen shot of current interface.
- Tap **Mute** to eliminate the voice on C317X's side.
- Tap **Switch** to switch from video call to audio call or vice versa.
- Tap **Cancel** to hang up the current call.

2.4. Monitor

Monitor feature enables users to view the real-time video from IP cameras or door phones anytime. Click **Monitor** in the home page.

Figure 2.3.2-1 During session

Figure 2.4-1 Monitor

2.4.1. Checking the Monitor

Choose the outdoor devices from the list. The real-time video from the door phone or IP camera will show in the screen .

- Press Unlock to open the door which is connected with door phone.
- Press **Capture** to take a screen shot of current interface.
- Press **Cancel** to exit the monitoring.
- Press List button in the bottom right corner to wake the outdoor video list.
- Press the Monitor list in the right side to choose the outdoor videos.

Note: Only under Discovery mode, users need to press **Update** key manually to synchronous the devices which is in the same node.

Figure 2.4.1-1 Live view list

Figure 2.4.1-2 Live view video

Akuvox Smart Intercom

2.5. Message

Message ① indicates how many messages are unread (An unread message for an example). Or directly enter the message interface to manage.

2.5.1. Text Message

- Tap **Message** ① on the main interface to view the unread message.
- Tap the unread message ② to view the message in details.

Figure 2.5 -1 Message

Figure 2.5.1-1 Text message

2.5.2. Creating a Message

- Press **New** key (1)to create a new message.
- Enter the destination number manually ② or choose the contact from the contact list ③ or select the device quickly from the below list ④.
- Choose the frequently used message (5), such as "Hello,"
 "Help." Or input the message content which users want to send
 (6).
- Press **Send** key ⑦ to send.

Figure 2.5.2-1 Create message

Figure 2.5.2-2 Create message

2.5.3. Deleting a Message

- Long press the message ① to select it.
- Click Select All ② to select all message in the message lists.
- Click **Delete** ③ to delete the messages have been selected.
- Click **Cancel** ④ to cancel the operation.
- Click **Back** icon (5) to exit the message interface.

Figure 2.4.2-1 Delete message

2.6. Arming

Tap **Arming** to enter the Arming interface. Arming feature is not displayed by default. Users can ask administrator to enable it. Please refer to chapter 3.4.10.

C317X supports 4 modes, including **Home** mode, **Night** mode, **Away** mode and **Disarmed** mode.

2.6.1. Arming Mode

Go to **Arming - Arming mode**. Users can see all of the 8 zones and corresponding sensor types. Slide down to check more information in this interface.

- Adjust Defence delay time. It means when users change the arming mode from other modes, there will be 90 seconds delay time to get activated.
- To setup the Alarm delay. It means when the sensor triggered,

Figure 2.6-1 Arming

Zone8	Bedroom	Infrared	90s delav	90s delav	Disable

Figure 2.6.1-1 Arming mode

there will be 90 seconds delay time to announce the notification.

- The **Status** in the corresponding zone means whether the zone is available or not.
- Press **Save** in the top right corner to save the modification.

2.6.2. Disarm Code

Go to **Arming** - **Disarm Code** to enter the disarm code settings interface. Users can modify the disarm code here.

- Enter the **original disarm code** ① first, and it is 0000 by default.
- Enter the **new disarm code** 2.
- Enter the new disarm code again ③ for confirming.
- Press **Save** to save the modification.

Figure 2.6.2-1 Disarm code

2.6.3. Alarm Log

Go to **Arming - Alarm Log** to enter the alarm log interface. Users can check the alarm log, including "location," "zone," "zone type" and "alarm time."

- Hold an **alarm log** ① and it will show up delete prompt.
- Press Select All ② to delete all alarm log or select a part of existed messages then click Delete ③.
- Press **Cancel** ④ to cancel to deletion.

2.6.4. Status

Go to **Arming** - **Zone Status** to enter the zone status interface. Users can check the status of zones, including "location," "zone type," "trigger mode" and "status."

3.4.8. Capture

On the device, go to More - Settings - Call Feature.

C317X will automatically take a screenshot from the visitor during the talking, or users can tap the **Capture** key during the live view or calling manually and the capture will be saved in the default path. Users can change the default path by themselves.

3.4.9. Logo

On the web portal, go to **Phone - Logo**. Users are able to upload the logo picture, C317X will display the logo when powering up.

Click **Reset** to reset the boot logo to original one.

3.4.10. Key Set of C317X Monitor

On the web portal, go to **Phone** - **Key/Display**. Users can customize the feature icon display, to choose which feature will be shown and where it will be displayed.

Type: To select which function shall be displayed on the home page or more page. "DND" and "Message" are displayed on home page, "Call," "Contact," "Settings" and "Status" are displayed on more interface by default.

Value: To fill in corresponding parameters for some types. For example, if users want to display a third party APP on the home screen, the type shall be chosen as "Custom APK" and fill in the value with corresponding package name and class name.

Example: To view the display example of C317X on home page interface or more interface.

3.5. Local PhoneBook

3.5.1. Adding a Contact

On the device, go to More - Contacts - LocalPhoneBook.

- Enter Contact interface, and then press + symbol ① to add new contact.
- Type in new contact name ②.
- Click Number 1/2/3 ③ to enter number 1/2/3, which could be SIP number or IP number. It is supported 3 numbers for each of the contact person.
- Click CameraUrl ④ to enter RTSP URL of outdoor unit.
 Note: The RTSP URL of Akuvox door phone is rtsp://device_ IP/live/ch00 0.
- Tap **Cancel** (6) to cancel the operation or press **Confirm** (5) to make changes to the contact setting.

3.5.2. Editing a Contact

On the device, go to **More - Contacts - Local PhoneBook** to enter contact interface, and select one existed contact.

- Press Edit icon ① to modify the exited contact.
- Press **Delete** icon ② to delete a existed contact.

On the web portal **PhoneBook** - **Local Book**, users can also do some modification about contact.

Contact: To display all contact or black list.

Search: To search the contact by entering number or name. **Dial:** To dial out the number that users have filled in.

3.5.3. Contact Import/Export

Import/Export: To import or export the contacts in bulk, please make sure the format is correct.

3.5.4. Black List

On the device, go to More - Contact - LocalPhoneBook - Black List.

- Click **All Contacts** ① to switch the local phone book from all contacts to black list or vice versa.
- Press + ② to add number into black list.
- Click phone book icon ③ to view the existing contacts in local phone book.
- Tap contacts ④ to select the corresponding contact person into black list.
- Tap Select All (5) to select all contacts.

Figure 3.5.3-1 Import/Export contact

- Tap **Confirm** (6) to add contacts into black list.
- Tap **Cancel** (7) to cancel the operation.

On the web portal, PhoneBook - Local Book - Contact - Blacklist.

User can also do some configurations.

Contact: To display black list or all contact.

Search: To search the contact by entering number or name.

Dial: To dial out the number that users have filled in.

BlackList Setting: To add new contact to black list.

3.6. Intercom Call

3.6.1. IP Direct Call

Without sip server, users can also use IP address to call each other,

but this way is only suitable in the LAN.

On the web portal, go to **Phone - Call Feature - Others - Direct IP** to enable the direct IP function.

Enter the IP address of the caller, and then press Audio Call or Video Call to make a call.

3.6.2. SIP Call

Sip call uses sip number to call each other which should be supported by sip server. Users need to register an account and fill some sip feature parameters before using it. Direct IP

Enabled ~

3.6.3. Account Status

On the device, go to More - System Info - Account.

Users could check the basic SIP account status here, registered means it is ready for using.

On the web portal, go to **Status** - **Account** information to check the basic information of SIP account.

Figure 3.6.3-2 Account info

3.6.5. SIP Server

Enter the SIP account address which points to the sip server.

Server IP: To enter SIP server's IP address or URL.

Port: The specified port number for the sip server.

Registration Period: The registration will expire after registration period, and C317X will re-register automatically within registration period.

On the web portal, go to **Account** - **Basic** to check the information of SIP account in details.

3.6.6. Outbound Proxy Server

On the web portal, go to **Account** - **Basic** to setup outbound proxy server.

Outbound Proxy Server: To configure the proxy server to receive all initiating request messages and route them to the designated SIP server.

3.6.7. Transport Type

On the web portal, go to Account - Basic to setup transport type.

- UDP: UDP is an unreliable but very efficient transport layer protocol.
- TCP: Reliable but less-efficient transport layer protocol.
- TLS: Secured and reliable transport layer protocol.
- DNS-SRV: DNS record for specifying the location of services

3.6.8. Auto answer

On the web portal, go to **Account** - **Advanced** to enable /disable auto answer feature. It will auto answer all incoming calls if it is enabled.

Figure 3.6.8-2 Whitelist setting

Note: Auto answer is only available with SIP accounts.

On the web portal, go to **Phone** - **Call Feature** to setup auto answer whitelist. It will auto answer the incoming calls when the caller is in white list.

Device Location: To enter the device name /location.

SIP/IP: To enter the SIP /IP number of the corresponding devices. **Auto Answer WhiteList:** To display the SIP /IP number stored in C317X's white list.

Note: White list takes effect both SIP account and IP address.

3.6.9. Assistance call

Assistance call is used to call out the emergency numbers in loop times when users need help. Users could choose to display SOS on the home /more page, please refer to chapter 3.4.10 about the feature display setting.

Figure 3.6.10-1 Multicast group

Call Number: To setup 3 SOS numbers. Once users press SOS key on the home page (SOS display key shall be set on the web manually), C317X will call out the number in order.
Call Timeout: Setup the timeout for each number. Once users call out, if the other side will not answer within the timeout, C317X will call the next number.
Loop Times: To setup the call loop times.

3.6.10. Multicast

Multicast function could only be applied among indoor monitors. After configuration on the web portal, users could tap **All Call** on the home page of the device to make a call.

On the web portal, go to Phone - Multicast.

Multicast Setting: To set the C317X in one of the groups or disable this function.

Multicast Setting			
Multicast Group	1	▼	
	Listen List		
Listen Group	Listen Address	Label

C317X Admin Guide

Number: To enter the IP address/SIP number of the corresponding camera. Enter the RTSP or ONVIF URL of the door phone or IP camera.

Doorphone ID/Device Name: To enter the ID number of doorphone, which could be set by users.

RTSP Address/Destination URL: To set the RTSP URL for the door phone. The RTSP format of Akuvox door phone is **rtsp://device IP/live/ch00_0**.

User Name: To enter the user name if required.

Password: To enter the password if required.

On the web portal **Phone** - **Monitor**, users can also setup the monitor information.

AKUVOX

Figure 3.7.1-2 Live view in web

3.8. Access control

Figure 3.8.2-1 Local relay setting

3.8.1. Face ID

On the device, go to **More** - **Settings** - **More** - **Face ID** to setup face ID to access to C317X, which provides setting security.

- To implement face ID feature on C317X, the Screen Lock on display setting interface should be enabled first.
- The whole process is actually self-explanatory, follow the indication to record users' face ID to C317X.
- When screen lock is enabled, users could choose face ID or password (System code) to enter C317X.

3.8.2. Local Relay

C317X has NO/NC/COM three terminals which supports to connect locks by itself.

	Relay Setting	
Local Relay1		
Relay Delay(sec)	3	۲
local Relay2		
Relay Delay(sec)	3	٠

C317X Admin Guide

Figure 3.8.3-1 Remote relay setting

Go to $\ensuremath{\textbf{Phone}}$ - $\ensuremath{\textbf{Relay}}$ to setup the DTMF code of local relay in

website. Users can press the **Unlock** key during the call.

Relay Delay: To set the delay time for local relay.

Status: To enable or disable the softkey in talking page.

Display Name: To modify the display name of unlock icons in talking page.

Relay: To set the relay type, including local relay 1/2, remote relay HTTP and remote relay DTMF.

3.8.3. Remote relay

C317X can use the unlock key during the call to open the door in doorphone's site. Users need to setup the same DTMF code in the door phone and indoor monitor.

Remote Relay: To set DTMF code for remote relay, which is "#" by default.

Figure 3.8.2-2 Relay display

to their own application. On the web portal, go to Upgrade -

Key/Display.

Package Name: To fill in the package name of APK (For example:

com.akuvox.mobile.smartplus).

APP Class Name: To fill in the class name of APK (For example:

com.akuvox.mobile.module.main.view.SplashActivity).

Start Up Enable: To choose whether APK should start up automatically when power up.

Turn Back Apk Enable: To choose whether turn back APK without

operating for some interval.

Intervals Without Operating: To choose how much time to turn back APK without operating.

Show App Icon: To choose whether to show APP icon on the home interface or not.

Figure 4.1.2-2 Discovery setting in web

4.1.2. Discovery setting

If **Discovery** mode is adopted, users don't need to configure the devices by themselves. C317X will scan automatically all types of the devices on the same discovery node.

On the device, go to **More** - **Settings** - **More** to configure the discovery mode and location name. **Discovery Node/Device Address:** To indicate the locations of the device (For example, device address 1.1.1.1.1 means that this device is located in Community 1, Building 1, Unit 1, Floor 1, Room 1).

Discovery Extension/Device Extension: To display the extension number of the device.

Location/Device Location: To enter the name/location to distinguish devices from each other.

On the web portal **Network** - **Advanced**, users can also make changes to the device connecting node.

Connect Setting				
Device Address	1.1.1.1.1			
Device Extension	1

Figure 4.2.7-1 User agent

Figure 4.2.6-1 NAT

Codec Resolution: To adjust the resolutions for different video codecs.

Codec Bitrate: To adjust the bitrate for different video codecs.

Codec Payload: To adjust the codec payload for video codec.

4.2.6. NAT

On the web portal, go to **Account - Advanced**.

UDP Keep Alive Message: To send UDP keep alive message

periodically to router to keep NAT port alive if enabled.

UDP Alive Msg Interval: To Keep alive message interval.

RPort (Remote Port): To add remote port in to outgoing SIP message for designated account if enabled.

4.2.7. User Agent

On the web portal, go to Account - Advanced.

NAT		
UDP Keep Alive Messages	Enabled •	
UDP Alive Msg Interval	30	(5~60s)
RPort	Disabled •	

User	Agent
User Agent	Akuvox

User Agent: To customize user agent field in the SIP message. If user agent is set to specific value, users could see the information from SIP message. If user agent is not set by default, users could see the company name, model number and firmware version from SIP message.

4.2.8. DTMF

On the web portal, go to **Account** - **Advanced**. **DTMF:** To configure RTP audio video profile for DTMF and its

payload type.

Type: Support Inband, Info, RFC2833 or their combination.

How To Notify DTMF: Only available when DTMF Type is Info.

DTMF Payload: To configure payload type for DTMF.

4.2.9. Encryption

On the web portal, go to Account - Advanced.

Figure 4.2.9-1 Encryption

Location: To select which location the detection device is in, including Bedroom, Guest room, Hall, Window, Balcony, Kitchen, Study and Bathroom.

Type: To select which type of detection device is, including Infrared, Drmagnet, Smoke, Gas and Urgency..

Trigger Mode: To setup triggering mode for the sensor, including NO (normal open) and NC (normal closed).

Alarm Status: To setup status of alarm sensor, including enable, disable and 24H.

Note: Disable status of detector means it cannot be triggered, 24H status means it cannot be disabled. Enable status means it depends on arming mode.

4.4.2. Motion Detector

Users could choose to display **Motion Detector** on the home/more page, please refer to chapter 3.4.10. C317X could

57

Figure 4.4.2-1 Motion detection

Figure 4.5.1-1 Basic upgrade

receive the captured motion pictures from the door phone, which requires the configurations on door phone.

4.5. Upgrade

4.5.1. Basic Upgrade

On the web portal, go to **Upgrade - Basic**. **Firmware Version:** To display the firmware version at present. **Hardware Version:** To display the hardware version at present. **Upgrade:** To select the upgrading file from PC manually. **Submit:** To submit the upgrading file to C317X. **Cancel:** To cancel submitting the upgrading file.

Figure 4.5.2.1-1 PNP Option

4.5.2. Autop

Autop (Auto-Provisioning), this feature is used to configure or upgrade C317X in batch via the support of third party servers. To use DHCP/PNP/TFTP/FTP/HTTP/HTTPS servers to get URL, and then download firmware and/or its corresponding configuration files from servers. These configuration files and firmware will be used to update firmware and the corresponding parameters on the phone.

4.5.2.1. **PNP** Autop

PNP (Plug and Play): To enable or disable Plug and Play feature, which will send SIP subscription message to PNP server automatically to get auto provisioning server's address if enabled. By default, this SIP message is sent to multicast address 224.0.1.75 (PNP server address by standard).

	PNP Option
PNP Config	Enabled v

4.5.2.2. DHCP Autop

DHCP Option: To use designated DHCP option to get auto provisioning server's address via DHCP.

4.5.2.3. Manual Autop

Manual Autop: To display and configure manual update server's settings.

URL: To fill in the Auto provisioning server address.

User Name: To fill in the user name if server needs an username to access, otherwise left blank.

Password: To fill in the password if server needs a password to access, otherwise left blank.

Common AES Key: To decipher common auto provisioning configuration file for C317X.

Akuvox Smart Intercom

Figure 4.6.2-1 System log

4.6. Logs

4.6.1. Call log

On the web portal, go to **PhoneBook** - **Call Log**. Users are able to view all /dialed /received /missed /forwarded calls. **Call History:** To select which kind of calls users want to view, including dialed, received, missed and forwarded. **Export:** To export the call log.

4.6.2. System Log

On the web portal, go to **Upgrade** - **Advanced**. System log provides a professional method for administrator to debug . **System Log:** To display system log level and export system log file. **Log level:** To adjust the system log level, which ranges from 0 to 7 and it is 3 by default. The higher level means the more specific system log is saved to a temporary file.

System Log		
LogLevel	3 🔻	
Export Log	Export	
Remote System Log	Enabled •	
Remote System Server	192.168.35.115	

Figure 4.6.3-1 PCAP

Export Log: To export temporary system log file to local PC.Remote System Log: To enable/disable remote system Log.Remote System Server: To input the syslog server address.

4.6.3. PCAP

On the web portal, go to **Upgrade - Advanced - PCAP**. PCAP is a network packet capture tool in C317X itself, which provides an efficient method to troubleshoot network problems. **PCAP Start:** To start PCAP if users click **Start** button. **PCAP Stop:** To stop PCAP if users click **Stop** button. **Export:** To export the PCAP after capturing of packets. **PCAP Auto Refresh:** To enable or disable PCAP auto refresh.
