

ME6 IR DuraBullet

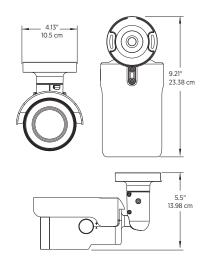

Rugged 6MP IR bullet camera with built-in video intelligence and HDR technology

The "Stopped Vehicle" analytic triggers an alert when a vehicle pulls into a parking space for curbside pickup.

The **ME6 IR DuraBullet** from March Networks[®] delivers high image quality, combined with built-in IR illumination, allowing you to discern objects in the dark from over 40 meters (131 ft) away. The housing is weather-resistant and vandal-proof, rated for severe outdoor conditions and extreme temperatures.

The camera features a set of powerful video analytics, including License Plate Recognition (LPR), tripwire, intrusion detection, loitering detection, and abandoned object. Video analytics enable organizations to enhance security in both public and private spaces by detecting perimeter or area breaches, unattended objects, and atypical activity more rapidly and consistently.

Key Benefits

Built-In Video Intelligence

- Abandoned Object an alarm is triggered if an object remains in one spot for too long.
- Loitering Detection an alarm is triggered when people remain in an area for too long.
- Tripwire an alarm is triggered when a person or object crosses the defined line.
- **Stopped Vehicle** an alarm is triggered when a vehicle remains in an area for too long.
- Intrusion Detection an alarm is triggered when people or vehicles enter a specific area.
- Object Removal an alarm is triggered if an object is removed from an area.
- License Plate Recognition detect and capture license plates to be used with Searchlight application.
- Enhanced for Curbside pickup. Using the stopped vehicle analytic, the camera can identify vehicles who pull into a parking space. The camera can alert the store staff of the presence and decrease waiting times for customers.
- "Region of interest" encoding. Identify parts of the scene as low or high importance, then adjust the compression levels within those zones, to save on storage.
- Digital Overlay High Dynamic Range (DOL-HDR). The camera blends the best parts of three separate exposures together to combine the most focused, well-lit, and colorful parts of the scene.
- Save money on storage and bandwidth. The low bit rate (LBR) setting reduces storage and bandwidth usage by 50% or more in most applications; streams can drop below 3Mbps at 6MP (15 fps).
- See better in polluted, hazy environments. The sensor can "see through" adverse conditions to capture details in smog, fog and smoky environments.

Thanks to embedded AI training, the camera is able to make intelligent decisions to recognize people and cars.
