### • WSR-1: Audio over WiFi Streaming Device

The **WSR-1 Audio Streaming Device** allows music to be wirelessly streamed from your smartphone, tablet or PC to your host audio amplifier, hifi or powered speaker system.

Multiple Wifi Audio Streaming devices can be used to provide a multi-room / multi-zone configuration, where units can operate independently or can be combined (playing one source on multiple output devices).

The WSR-1 Wireless Multi-room Audio Adapter allows any standard amplifier, hifi or powered speaker system to be easily transformed into a wireless device, supporting one-to-one connectivity with wireless devices such as iPhone, Smartphone, tablets, etc.

The product also allows for multiple WSR-1 devices to be connected together via a standard Ethernet network to create a multi-room / multi zone (and if linked to a WiFi network, multi-platform) wireless audio system, with the ability to connect your wifi device (smartphone, etc) to any WSR-1 devices on the network or a number of devices to be connected at the same time.

A local Audio Input is also provided via a 3.5mm Stereo Jack, to allow a wired connection to stream from a local "Plug In" source, the WiFi Stream when active will over ride the local wired input.

Control of the device is managed by an APP which can be downloaded from the iTunes or Google Play stores; the APP is called "Smartsonix". The device can also be accessed with Windows Media Player 12 and provides the ability to link/join units together to allow broadcast of the same content to multiple devices/zones and, control of device/zone volume level.

Powered via 5v USB from your host device or optional USB plug-top power supply (Part No. USB-CHRG).

#### Features:

- One-to-one wireless connection between audio devices
- Multi-room / Multi-zone wireless audio broadcasting
- Simple set-up and control of wireless audio networks
- Compatible with Airplay, iTunes, Smartsonix and DDLA compliant Apps such as Spotify, Deezer and BubbleUp
- Control via Smartsonix App (available from iTunes or Android App Store)
- Compact size allows device to be installed discretely and interfaced to your Sound System or HiFi system simply via a 3.5mm Stereo Jack output
- Supplied with mini-jack -to- mini jack audio lead
- Powered via USB 5v (lead supplied) or plugtop PSU (sold separately)

#### Specifications:

Model:	WSR-1
App Control	Compatible with Android/iOS
WiFi Connection	Airplay, DLNA, WiFi Direct (Miracast)
WiFi Standard	IEEE802.11b, IEEE802.11g, IEEE802.11n Standard
Audio Input	1x Analog Audio Input, 1x RJ45 (LAN connection)
Audio Output	1x Analog Audio Output
Audio Format	AAC LC/LTP, HE-ACCv1, HE-ACCv2, AMR-NB, AMR-WB, FLAC, MP3, Vorbis, PCM/WAVE, ALAC
Streaming	Spotify, Qplay, Deezer, Melon, Tuneln, IHeartRadio, etc.
Local Music	Streaming music directly from phone or NAS (Network Attached Storage)
Multi-room Playing	More than 60 devices can be combined to the same zone and play the same music
Power Input	Mini USB 5v, optional plug-top PSU
Dimensions	116(W) x 95(D) x 22(H) mm
Weight (Net)	0.12kg
